Summary

Software engineering student at MSOE with four years of hands-on industry experience spanning full-stack web development, XR applications, and AI-driven tools. Passionate about building intelligent, user-focused applications at the intersection of AI and emerging technologies.

Work Experience

Full Stack Software Engineer, Juno

August 2025 – Present

- Delivered a custom PDF viewer component in Next.js for a tax AI platform, enabling accountants to annotate documents and apply tax stamps interactively
- Collaborated cross-functionally as a developer consultant to deliver scalable front-end solutions in Next.js tailored to complex CPA tax documentation workflows

Software Engineer Intern, Skyward, Inc.

July 2024 – August 2025

- Developed, maintained, and enhanced the Qmlativ learning management system, an ASP.NET core webapp
- Delivered database migration tool optimizations improving migration times by 33%

Software Engineer Intern, L & S Electric, Inc.

May 2023 – August 2025

- Delivered a desktop enterprise application using C# .NET MAUI to commission generator excitation systems
- Conducted software verification in mission-critical environments, ensuring system reliability and safety
- Implemented multithreading and complex data structures to improve connection times by 660%

VR Software Developer, Self Employed

June 2018 – January 2021

- Delivered virtual reality and augmented reality software applications for product showcases at industry trade shows

Education

Milwaukee School of Engineering

September 2022 – May 2026

BS Software Engineering, GPA: 3.5

Milwaukee, WI

- MSOE A.I. Club Member
- Studied abroad in New Zealand at the Victoria University of Wellington (Feb 2024 – June 2024)

Projects

Personal Website: <https://alex-j-lopez.github.io>

- Next.js webapp deployed to GitHub pages via custom CI/CD pipeline
- Features 15 in-depth personal and professional projects

A.I. Fluid Measurement Tool: Container management and tracking in Lab environments

- Delivered a mobile and desktop application to classify, track, and measure fluid volumes in containers in a lab
- Leveraged computer vision to reduce human error
- Reduced time required to log lab fluid volumes by 50%

Mixed Reality A.I. Quality Assurance Application: Decreasing decision-making time in QA environments

- Delivered an Open XR mixed reality application for the Meta Quest 3
- Leveraged Vision Transformers and LLMs to decide whether an item is defective and the course of action

PLY Sequence File format: Novel Volumetric Video Storage Format for Metaverse communications

- Co-Developed a novel file format for storing and rendering point cloud data as volumetric video in Unity

Technical Skills

Languages: C#, Java, C, C++, TypeScript, JavaScript, R, Python, HTML, XAML, FXML, CSS, SQL

Tools & Cloud: Google Firebase, AWS, Microsoft SQL Server, Postgres SQL, Docker

Frameworks: Next.js, React.js, Node.js, .NET MAUI, .NET, ASP .NET, JavaFX, D3.js, SWR

Community Service

100 hours volunteered at a local YMCA to hold one-to-one and group technology information sessions.
